To dismantle a driver you just need simple tools such as socket wrenches Torx 25 and Torx 10 with a magnetic ending, side cutting pliers and protective gloves. It is not necessary to have any qualifications or training as our instruction leads you step by step to success. In the rest of cars you just need to dismantle the plastic protective bonnet of the engine and you are ready to start the disassembly of the driver. A set of tools necessary to dismantle the driver a socket wrench Torx 25 a socket wrench Torx 10 with a magnetic ending side cutting pliers protective gloves 02 02. The view on VP44 pump before the disassembly of the driver. Attention! To dismantle the driver you do not need to twist off the whole pump out of the car. The pump should be left in the car, you need to dismantle the driver only. 03 03. Detachment of the PSG5 plug from the driver.

In order to detach the plug you need to pull the protection that saves the plug from falling out. 04 04. The view on the PSG5 plug detached from the driver. 05 05. Twisting off the five screws attaching the cover of the driver with the use of the wrench Torch 25 06 06. Removal of the metal cover of the driver. 07 07. Cutting off the four wires connecting the driver with the electrovalves with the use of side cutting pliers. Attention! The point of cutting the wires should be placed at least 15 mm from the edge. 08 08. Twisting off the last three screws attaching the driver to the pump the order of removing the attaching screws is marked with numbers. 09 09. After unscrewing all screws, you should displace the driver carefully to the back of the pump. Attention! You can not violently pick up the driver, because there is the rotation angle sensor under it. 10 10. The view on the rotation angle sensor inside the pump, before its disassembly you need to twist off the two screws visible in the picture. 11 11. Twisting off the screws attaching the rotation angle sensor with the use of the wrench Torx 10 with a magnetic ending. Attention! You need to be very careful while taking out the screws. You need the magnetic ending of the wrench not to allow the screws to fall into the pump. 12 12. Separation of the driver and rotation angle sensor from the pump. 13 13. The view from above on the dismantled driver. Attention! You need to protect the rotation angle sensor from being damaged in transport. The picture in the frame shows how to protect the sensor from displacement in transport with the use of wire especially the tape joining the sensor with the driver is quite sensitive and may be damaged in transport. At the housing of the driver you can see its serial number and date of production. 14 14. The view on the driver from below. Attention!

Similarly to the previous photo you can observe in the frame that the rotation angle sensor is attached to the driver with the wire, which prevents the driver and the tape joining it with the sensor from being damaged in transport. 15 15. Fill out the order form, print it, sign and put into the parcel. 16 16. Packing the secured driver into the carton. The driver should be wrapped up in bubble foil or other material that will protect the driver in transport. Attention! The parcel should contain a legibly filled out and signed order form. Then you can send it at your expense to our address ZIPART Ltd. ul. Chynowska 8 PL 65138 Zielona Gora Poland. Gwarancja Dostawa Co zyskujesz naprawiajac w ElektroBip Sterowniki zaznaczane sa po naprawie plombami gwarancyjnymi z data naprawy i numerem kontaktowym do naszej firmy. Nalezy stosowac sie do zalecen gwarancji dolaczonej do sterownika. Warunki dostawy Podaj nr paczki na stronie UPS Sterownik pompy najczesciej uszkadza sie w taki sposob, ze nie mozna uruchomic silnika, rzadziej potrafi uszkadzic sie w inny sposob. Po podlaczeniu auta pod komputer pokazuje sie blad zaworu pompy, blad sterownika lub nastawnika pompy wtryskowej albo jak to czesto bywa nie ma zadnego bledu.Gdy cos dzieje sie z sterownikiem pompy

powinna być wymontowana cała pompa i naprawiona mechanicznie plus zamontowany nowy sterownik pompy. Wielu klientów po tym jak widzi że auto odpaliło bo zrobieniu samego tylko sterownika nie decyduje już się na remont pompy z względu na cenę naprawy całej pompy.

Z sterownika pompy podczas pracy silnika wychodzą sygnały sterujące zaworami umieszczonymi na pompie wtryskowej. Obserwując wbita w przewody zaworów kontrolkę można stwierdzić czy sterownik daje sygnał na pompę i czy mamy do czynienia z popularnym przepaleniem się sterownika pompy Przyspieszy to znacznie naprawę. Jeżeli nie posiadasz wystarczającej wiedzy i doświadczenia powierz sterownik pompy VP44 profesjonalistom. Nasza instrukcja pokazuje krok po kroku wymontować urządzenie bez jego uszkodzenia. W większości samochodów wyposażonych w ten typ pompy wygląda to podobnie. My opisujemy zdjęcie modułu VP44 w Oplu Vectra. Dalsze korzystanie ze strony oznacza, że zgadzasz się na ich użycie.
