Have you checked that they might be blocked Q Comments 135 for diyher. Voile coffee stain will be gone. I had a stainless steel travel mug and tried putting it in the dishwasher, and it filled with water between the outside and inside wall of the cup and leaked all over my counter when I took it out of the dishwasher. I didnt do that anymore., I also have thermos jugs that get stained on the bottom. Same soaking principle works on them.. See More Best Refrigerator. Q Comments 162 Well, I know

that above mikasmom1 says that it is ridiculous to spend a lot on a refrigerator, but we are totally redoing our kitchen right now, and we just took out a SubZero that had been there for 31 years and it was still running when it was removed. So, I have purchased another Sub Zero. It had been such a good refrigerator for so long, I thought the company deserved another go. I did NOT get a Viking or Wolf range though, due to all of the bad reviews on both of them, although I think Wolf may be making a comeback. I'm very excited to start using my new appliances. I waited a long time for this! P.S. My washer and dryer are Kenmores and they are about 20 years old and still going strong! See More Refrigerator GE Monogram or SubZero. Q Comments 61 After years of owning GE refrigerators we recently got a Subzero after many years of wishing for one. Love the looks and the space it offers. For the first time ever, the fresh cilantro bunches we buy have stayed fresh for over 4 weeks. I have noticed that other vegetables are staying fresh longer than in the GE. The downsides of the Subzero Design deficiencies For such an expensive machine, I am disappointed that it does not make clear ice cubes. The ice dispenser does not have a crushed ice option.

The water dispenser in the door is also very basic as compared to a GE. The drain pan below the water dispenser is unnecessarily complicated. There is a ridged part and a steel part that come out. And there is another part beneath both those that water pools under. It is not possible to wipe that one dry. So I am worried about moisture lingering there and growing things that I don't want. Problems I hope with our unit less than a month after installation the control panel display went bust showing only top half of the letter and numbers lit. Thankfully it is under warranty and will be replaced. But not what I expected from an expensive fridge. Q Comments 29 I lived in Europe for years, where front loaders is what you get. I now live in Australia, and have a Miele front loader, which is excellent. They are much gentler on clothes than most top loaders, are more efficient albeit slower and they fit under the countertop. Here, we buy detergent specifically for front loaders and I still use less than the recommended amount. I mostly run on cold or cool cycles, but it tells me when it needs to have a hot run for sanitation. For two people, it's great. For a family, I'd want a much bigger model. You can still see all customer reviews for the product. If you have strong water pressure when using the WARM cycle water will leak from the dispenser so you have to remove the soap dispenser. Dryer does a fairly good job on drying clothes sometimes sheets may get balled up when drying. I believe this is due to the fins in the dryer that are on an angle. Drying Sensor isn't accurate sometimes some of the clothes are still wet when the cycle says the clothes are dry. FUSSY machine needs service too many times. Reviewed in the United States on October 2, 2018. It's quiet and good with water usage. The drain opens and water goes everywhere, flooding the pan underneath which means again door won't open until the water dries out. I'll never buy a Bosch again. Mine is 8 years old now and currently it's locked with just an E, not even telling me what's wrong and everyone's loads have been locked in. Very upsetting. Please try again later. Mel 2.0 out of 5 stars. The drain opens and water goes everywhere, flooding the pan underneath which means again door won't open until the water dries out. Very upsetting. Please try again later. Yes, it has continued to wash clothes for several hours while I was at work and the count down stays at 1 minute left, it never finishes, it never changes cycles. Sometimes it just doesn't spin the clothes, it will get to the spin cycle, and just slowly spin forever without getting up to full spin speed, again, it never finishes its process. Sometimes the door lock doesn't work, it will not unlock, and just keeps trying to unlock again and again. Sometimes I hit pause and it causes an error, and it starts the drain and spin cycle immediately. No wonder Bosch stopped making washers and dryers. After a disaster of a machine like this, I am sure they have lost all credibility in the product category.

From other reviews of the Bosch Vision 500 I have read, it seems I am definitely not alone. Please try again later. Please try again later. Vivian 1.0 out of 5 stars. However, I wish I had bought a different washer and spent more time choosing it. I made a quick buy based on price and immediate availability, when moving into a new home that had no washer or dryer. I come from Europe and am used to, and expect, frontloader washers. I expect more features, better usability, and much better quality than I have with this washer. Problems almost impossible to find, open, clean and replace the seal of in a watertight way the lint trap. You have to pry the front/bottom cover of the washer off with a screwdriver through holes located on the sides, both sides, of the washer, so you first have to pull it out from wherever it's installed; you cannot remove the cover from the front only. The screw on top to the trap is at an awkward angle inside the machine. Any grit that has accumulated within the lint trap gets trapped in the threads and makes it almost impossible to replace the top and make it fully watertight. As it's a good practice to clean the lint trap regularly, this is REALLY poor design. All other washers that I have used have the trap cover in an easily accessible place.

There's no way to program for an extra-heavily soiled wash i.e., no prewash program. Program choices are very limited. THAT DARN PINGING that goes on, and on, and on when the wash is finished. Yes, you can turn it off but as it's a matter of pressing certain buttons in a certain order, it resets itself on a regular basis and PING PING PING PING PING darnit I know the wash has finished and I'll empty it in my own good time stop PINGING. Please. And a note for anyone installing any washer and dryer. Make sure to ask the installers to put the washer on the left and the dryer on the right, otherwise they WILL do it the other way around. And then when you go to wash something, you'll find

the doors open towards each other. Then you'll either have to reinstall both the washer and dryer, or keep struggling to move the wet washing over the doors into the dryer. NOTE TO SELF remember this next time! Good points its a frontloader washing machine, it washes clothes well, it has an ecofriendly setting lower temperature, and it does the job. If I were buying again, Id go slightly more upscale. Please try again later. Please try again later. Jim ORourke 1.0 out of 5 stars When it overheats, this means the door will not open. Our technician has been here half a dozen times trying to fix it. The entire door latch mechanism, and some other surrounding parts, have been replaced, but that doesnt fix the problem. Even before this problem started, it had a bad feature of retaining water in the folds of the front rubber gasket. You have to towel out the excess water every time you finish a wash. If you dont, the machine will soon stink. This is an annoying piece of junk. Please try again later. Please try again later. MM 5.

0 out of 5 stars The Bosch Vision is different from other machines Ive owned in the past in terms of cycle selection, temperatures and options so it does pay to familiarize yourself with the manual before use but its not difficult to get up to speed in 15 or 20 minutes of reading. I do agree with one reviewer who said the handwash cycle isnt great for removing stains or deep cleaning. It is a very short cycle designed to keep delicate clothes in top condition and at this it succeeds, just dont expect deep cleaning power. I do generally run most cycles with an extra rinse but this machine cleans with incredibly small amounts of water, even with the additional rinse the total water consumption is very low. Im amazed at how little detergent is necessary to achieve a bright, fresh appearance and feel to all my clothes. The manual warns about using too much detergent and I think other users either do not read the manual or dont understand how little is needed for optimal cleaning. I use Method liquid detergent which says four pumps is for one load. Ive experimented with different amounts of detergent and learned that most small to moderate sized loads of normal soiling get super clean with only one pump of detergent. For more heavily soiled loads with oils, greases, sweat and other contaminants that break down the detergent Ive found two pumps provides better excellent results. I might use three or four pumps but only for large loads of clothes worn by a deep fry cook or mechanics overalls full of oil residues. And at 4.4 cubic ft. you can do some really large loads. I washed a load of really absorbent thick white cotton bath towels that completely filled the drum using two pumps of Method detergent and one ounce or regular bleach and they came out smelling fresh, looking bright and super soft and fluffy.

Smooth and as close to silent as one could hope for the sound barely changes from small to huge loads and Ive the machines have never shaken or vibrated regardless of load size. I dont understand the problem some have reported with mold. The only precaution Ive taken is to leave the washer door slightly ajar for one day after Ive done laundry then I close it if I want and there has been nothing but fresh, clean smells. I cant say that about my first frontload laundry pair Maytag Neptune. They molded within the first month or so and the smell never went away even after I had the redesigned seal installed. And the Neptune never got my clothes completely clean. The Bosch manual says too much detergent can cause mold and I think this is the likely culprit for those who have reported a moldy smell from the Bosch. Only use a small amount of detergent, less than you think will work. You will save a lot on detergent costs and have clothes that are cleaner and fresher than ever. This is a difficult concept to come to terms with for people who are accustomed to waterguzzling top loaders. Please try again later. Please try again later. Consumer66061 2.0 out of 5 stars They are probably okay if you are a complete Nimrod, and want the standard settings on the machine to do the thinking for you, but I have been doing laundry many years now, and I know what temperature, cycle, etc. It does however, think that a choice of spin speed is vitally important, because you can change that on every cycle. I dont really know what temperature these wash in and unless you refer to the graph in the manual, you wont, so I only use them for those things that have been washed 1000 times before. Many cycles seem extra long the Xtra Sanitary cycle is about 3 hours long when you add a stain cycle. And you may think I am kidding on this next thing, but the

minutes during the countdown of a wash cycle are sometimes much longer than a minute.

One time, a cycle had one minute left for 5 minutes and this is not the same everytime Seriously. Now, let me be straight, I have found nothing seriously adverse about the way they clean the clothes. Thats pretty standard. The drying on the otherhand, takes some creativity on which cycle usually cycles to choose to get the stuff dry in the least amount of time. The end cycle signals are the MOST annoying feature. They ring incessantly okay, thats a lie.they do stop after sometime longer than 20 minutes of beeping about every 6 seconds. I havent let the beep go on much longer than that, because it drives us crazy but if you are trying to sleep or just cant get to the washer right away it will drive your whole household insane until someone rushes in and opens the washer door to stop it. How many times do you have to be reminded that the wash cycle is finished. Once or twice would suffice, right. The dryer also has its own annoying cycle beeps which can be changed if you want to. I am still figuring this out. Rinsing well seems to be a problem, and I only use 12 tablespoons of detergent, as recommended, even if you add the Allergy Rinse. This leads me to vibration mode. On Max Spin our whole house vibrates sounds like a helicopter is hovering overhead.We have now opted to choose a lower spin speed each time we start another load, if we actually remember to do it. We, after wrenching these two monster units into place in our newly remodeled laundry room, erroneously assumed we could switch the washer door opening, as we could on the dryer. Uhuh. So now we have a washer that opens to the wrong side. Umm, what else Oh, yes.the drying cycles on the dryer of course restart their time ALL OVER AGAIN if you happen to want to open the door to check on how your load is doing, or add another item.

For example, if you have chosen a cycle that takes 60 minutes, and its been running for 40 minutes and you are wondering if your shirt is dry enough yet so you open the door to check on that shirt and no, its not dry enough so you throw it back in and close the door. The timer then automatically resets back to 60 minutes no kidding.You get to start all over again, or choose another cycle entirely. So, if I had enough money to give these away, and get another brand like my old LGs, I would. If this helps someone else avoid some angst, then it has been worth my time.Please try again later. Please try again later. eMCee2 2.0 out of 5 stars The kicker for me is that we bought our set in March 2010; I started getting E17 errors just under 2 years later. The part was replaced under warranty, but of course the labour was not. While the local service people were good, the Bosch service center response left a lot to be desired. Now, about 14 months later.There are some stupid design things on the companion dryer as well.Doubt I will be buying a Bosch again.Please try again later. Please try again later.If I were asked to imagine a day in my life doing laundry 20 years from now, I would naturally expect this to be the machine I'd be using.Please try again later. Please try again later. Please refer to product details and specifications when making a final selection for purchase.
