Half the size of the original 321 systems speakers, Boses patented Gemstone speaker array works in concert with the systems TrueSpace surround processing to deliver a spacious, multichannel presentation from just 2 visible speakers and a hideaway Acoustimass module. Using Bose TrueSpace proprietary digital processing circuitry, the 321 GS.II system improves the sense of spaciousness imparted by stereo recordings and exciting movie effects from Dolby Digital and DTS surround encoded materials. Yet its few parts require little effort to set up, so you can enjoy your new systems performance right away it even comes with a helpful system setup and demo disc. Progressive scanning, referred to as 480p for the number of horizontal lines that compose the video image, creates a picture using twice the scan lines of a conventional DVD picture, giving you higher resolution and sharper images while eliminating nearly all motion artifacts. Proprietary Videostage 5 decoding circuitry goes beyond conventional digital technology to bring new life to old movies and music. It gives you a surround sound experience from practically any source, including older media such as videotapes, stereo CDs, even mono TV programs. Advanced postprocessing techniques automatically deliver a clear, onscreen audio center image and balanced surround sound, similar to that of a 5.1 encoded DVD. In the Bose Acoustimass module, 2 downward firing drivers give you powerful performance for the lowest audible notes and effects. <http://ceramkgres.ru/userfiles/compaq-evo-n115-manual.xml>

And proprietary Bose technology ensures that you hear with clarity the proper balance of deep lows from all channels for music and movies. Hide the module almost anywhere, even behind furniture, and all the sound seems to come from the small cube speaker arrays. If you have other Bose hardware already in place a Wave music system, a 321 Series II DVD system, or a Lifestyle system you can hook it up to this 321 GS.II system using an optional 50 foot Bose link B connection cable to extend your entertainment to an additional listening area. You can also expand upon the 321 GS.II system later by integrating it with a Lifestyle system. Note Bose recommends that you maintain at least 3 feet 1 meter of space between the 2 speakers with no more than 3 feet 1 meter between each speaker and the edge of your TV screen. Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Fabio Arturo Penaranda 4.0 out of 5 stars Had heard it displayed in Bose store. At home, hooked to my new home theater system, it blew me away!!!! I can't get enough of it. I have a 1400 square foot home, open floor plan and it more than fills the space. Get the dandy floor stands The equipment even though many years old, was in good working condition. Bose AV321II Media Center Home Entertainment System This unit will only include the following Acoustimass subwoofer, Bose remote control, manuals, 2 The AV321 and

AV321 GS media centers are to be used only with the PS321 or Home Theater System Bose 321 GSX SERIES III Owners Manual. Reload to refresh your session. Reload to refresh your session. You should upgrade or use an alternative browser. All I'd like to do is send a typical signal from the preamp subwoofer output of a receiver into two of those 16 pins to get subwoofer sound from the Acoustimass woofer. I'm sure I could just run speaker wires right into the speaker wires, as I don't think that they'll pull that much power, but I'd like to make use of the Amp in the woofer if possible. This is just for fun, as I like taking things apart and just messing with them, but I wonder if this is more trouble than it's worth, though if it did work reasonably well, I'd take it to school and use it on a receiver that I have there for my kids. Thanks for any advice. If you ask someone from Bose they would tell you that it cannot work with other equipment and that it's proprietary, they won't discuss it on a technological level. If you guess wrong, it may fry or you may fry something valuable of yours receiver or some such thing. My advice, put it up for sale on Ebay with no reserve or bid set, you will at least get some change out of it. I absolutely don't recommend wasting time and possibly your equipment on this Bose Acoustimass Module. Trust me, it's the best advice you will get. Destruction has its own perks. But even if you did get it working, you would probably find that the sound quality is disappointing, extension lacking and very boomy. As Dave pointed out, even if you get it to work, you will likely be sorely disappointed with the results. You'd be better off just going out and purchasing a low-priced cheap subwoofer from Best Buy or something rather than trying to employ this for use with any standard receiver, if you're just looking for something that works well enough for class. Destruction has its own perks. But even if you did get it working, you would probably find that the sound quality is disappointing, extension lacking and very boomy. Is it worth the risk of destroying good equipment with a piece of crap.

I have personal experience messing up a good piece of equipment because I was tinkering around with a crappy piece of equipment. I can only recommend selling it, or taking it apart for fun. I suppose if you had a piece of junk Kenwood receiver laying around you could torture it with the Bose. All I'd like to do is send a typical signal from the preamp subwoofer output of a receiver into two of those 16 pins to get subwoofer sound from the Acoustimass woofer. Thanks for any advice. For choice of product to expend that time and energy into. All said and done, kudos for making it work for you, stay a while and we could have a nice symbiotic situation going. I purchased the front speakers of a 321 system and hooked them up to a regular surround sound stereo as my surround speakers. First off I noticed the Bose had 4 pins on each. 2 speakers are in each of the cabinets. Each speaker measures 4 ohms. In parallel that would break it down to 2 ohms. That would fry my amp. Series would be the only way to go. I did this on both sides. I merely soldered my leads onto the pins. Voila! all is good. Bose doesn't want people using anything but Bose connected to their systems. It's why the fancy plugs and stuff. I'm using Bose 201s as my front speakers and this small 321s normally the front as my rear surround sound. Works awesome. I now want to hook up a Bose subwoofer using a Sony subwoofer now to complete my system. I know getting info from Bose on this won't be easy top secret, classified national security issues. But I will figure it out. These are powered speakers, which means I'll probably use the amp built in. I don't know if it has a built-in power supply, if the inputs are normal line level or what. At worst, I will use another amp with a low pass crossover and power the speaker. Won't know much till I get them. Wish me luck. I'm sure I'll figure it out and when I'm done will post more info on this. View attachment 14594 Make sure they are wired in series and in phase.

In parallel they will probably be too low of impedance and fry your amp. In phase is because you want all the speakers to push and pull together. Basically you're jumping the out-negative of one into the in-positive of the other. Then just hook the positive lead to the positive of your amp speaker outputs

and the negative to the negative of your amp speaker outputs. I purchased the front speakers of a 321 system and hooked them up to a regular surround sound stereo as my surround speakers. Wish me luck. Im sure Ill figure it out and when Im done will post more info on this.Thanks! Chad Ive messed around with so many things that now I can take almost anything apart with confidence and read a repair manual. New fridge, washer, stove, furnace.nope, not today. Ive messed around with so many things that now I can take almost anything apart with confidence and read a repair manual. New fridge, washer, stove, furnace.nope, not today.I should start by saying that I am not a great audiophile by any stretch, but like kucor88 and other's here I do get distinct pleasure out of making what I have work, before necessarily running out to buy the latest and greatest. I am running these Control 25t's currently directly from the amp's second channel, partly because of curiosity on how they would sound together with the Bose system and partly because of how they fit in the room itself and while I imagine there is likely any number of different ways to lay this out I was curious how these two direct JBL speakers would complement the system as a whole, hoping I guess they would help fill areas cut or phased out by the more strictly controlled Bose satellites. What I found is actual quite opposite.

The JBL's hooked up directly the amp as they are now do not sound great even with what I expect is a reasonably fair crossover built within their own little enclosures and seem to be struggling with the presumably wider host of frequencies they are now being asked to produce without any other form of frequency cutting or tweaking. Obviously everything would be wired up through the Acoustimass sub unit, as per normal, but I wonder how best to setup the JBL Control 25t's to cope with this arrangement. What Wattage setting I may want to invoke and if I should possibly do anything with the internal transformer or crossover mechanism likely already inside the Control 25t's now in doing so. I tried to find information about that and i see your web. I want to ask you if its possible to do it, in ps321 series 3. Thanks in advance. Sorry for my english. The one mine uses is the square, 15pin connection. Im just wondering if anyone is able to clarify his work, or provide a better translated explanation. Thanks in advance I agree with that. If the television does not offer HDMI support, the Bose can also connect using standard Composite video capabilities. Insert the plug so the Bose logo is facing up. Early systems used an inbuilt CD player, followed by a DVD player and later models were AV receivers which used external audio sources.Early systems used an inbuilt CD player, followed by a DVD player and later models were AV receivers which used external audio sources.It is ideal for rock enthusiasts to whom sheer sonic impact is of paramount importance, and for classical listeners who want the next best thing to ambient stereo without the cost and the bother of rearchannel addons. However, we doubt that the 901 will appeal to perfectionists who have developed a taste for subtleties of detail and timbre. Cabinet. Asymmetrical design of the Bose 301 Series II offers balanced sound effects throughout the room.

Highsensitivity tweeters of these Bose stereo speakers facilitate wide scattering of the sound, letting you feel the surround effects even if you are at a distance.Retrieved 20080803. Note While these guidelines are offered to provide the best system performance, you may find other placement choices that are more convenient and provide the sound you enjoy. For reliable operation of the product and to protect it from overheating, put the product in a position and location that will not interfere with its proper ventilation. For example, do not place the product on a bed, sofa or similar surface that may block the ventilation openings. Do not put it in a builtin system, such as a bookcase or cabinet that may keep air from flowing through its ventilation openings. Keep both speakers at approximately the same height. Placing the speakers more than 1 metre away from the TV can cause the sound to become separated from the picture Positioning the speakers too far back in an enclosed space can change the overall quality of sound and alter the movie sound effects Angling one or both speakers into or away from the listening area significantly alters system performance.

This prevents a blocked port or overpowering bass Do not lay it on its side or stand it on either end With the speakers and media centre placed as directed, you can enjoy the freedom to sit, recline or move about in the room without missing a note. Connecting the speakers Hand tighten the screws on either side of the plug so they are snug. Do not overtighten the screws. Insert the other end of the module cable into the ACOUSTIMASS MODULE jack. Insert the large end of the cable into an AC power outlet. Please feel free to share additional comments below. Click here for more information on the types of cookies we use and how to change your cookie settings. The wrong source may be selected. For example, an external device may be connected to input 1, but a source other than input 1 may be selected The speakers are automatically muted when headphones or any cable with a 0.32 cm stereo plug are connected to the system Make sure that there is nothing broken inside either end of the minidin connection. Check for any kinks or cuts. If the cable is broken or damaged in any way, replace the cable The speakers are automatically muted when headphones or any cable with a 0.32 cm stereo plug are connected to the system Turn the system off, unplug from power for 60 seconds, reseal the audio input cable at both ends, reconnect power and try the system again If the centre speaker is not playing, make sure the system is in three or fivespeaker mode and the centre speaker volume is adjusted appropriately. If the rear speakers are not playing, make sure the system is in fivespeaker mode and the surround speaker volume is adjusted appropriately Please feel free to share additional comments below. Some items will need work or may be missing small parts, instructions or accesories. It is always best to inspect before buying. Download halo wars full version pc game. The 321 GS III combines superb functionality with an impressive 24bit digital media center that utilizes an advanced DSP technology to create independent sound fields that envelop you in an unmatched 5.1channel Dolby Digital surroundsound experience. Moreover, multiroom expansion is possible with an optional Bose Link adapter. This powerful option enables distribution of your favorite audio selections to up to 14 additional areas throughout your home, with independent volume control for each area. Your current DVD library will look and sound better than ever before, because this system offers backwardcompatible multiformat DVD playback, capable of upconverting your DVDs to a full 1080p highdefinition experience. Videostage 5 Decoding Circuitry With this proprietary Bose technology, you can enjoy fivechannel surround sound from everything you play, including older TV programs and VHS tapes originally recorded in mono. TrueSpace Digital Processing Circuitry Bose technology that delivers a spacious, multichannel sound experience with strong center imaging from just two visible speakers and a hideaway Acoustimass module. Gemstone Speaker Arrays With a very small footprint, the two Gemstone speakers are capable of delivering breathtaking headroom, with an outstanding audio signaltonoise. Its unique configuration eliminates the need to install multiple speakers in your home theater setup, by combining TrueSpace digital processing and acoustical geometry. They are designed to work with home theater systems to create a larger, fuller multichannel listening area without distorting the sound. Acoustimass Module The module delivers the clarity of pure lowfrequency reproduction down to the lowest frequencies, even at the loudest levels. It features an HDMI output, capable of upconverting standard video signals to 1080p HD resolution.

This technology enables the Bose 321 GS III to carry highdefinition video information through a single cable and achieving the highest quality picture available. Bose Link An optional Bose Link model AL8 allows other Bose speakers and systems to seamlessly connect to a Lifestyle system. So your system becomes the center of a wholehome solution that lets you enjoy sound throughout your home, wherever sound is important. Progressive Scan It features progressive scan playback, capable of scanning an entire video frame at once; scanlines commonly associated with interlaced video are drastically reduced. The result is a spectacularly clear image with no motion artifacts stairstepping, and details so sharp they seem as if theyre etched onto the screen. MultiFormat Playback Capability It offers a fullrange of playback capabilities for enjoying movies, music and images. It has builtin processors to handle the multichannel decoders for Dolby Digital surroundsound, capable of

advanced 24bit processing with an outstanding sampling frequency range. Active Electronic Equalization Balances output of all frequencies to provide natural tonal balance and clarity throughout the audio spectrum. Magnetically Shielded The speakers magnetically shielded to prevent picture interference when placed near your TV or display. Parental Control For parents who want full control of media content played back through player, the units menu features a parental control and rating system 18 adjustment. FullFeature Remote Control Included with this package is a fullfeature remote control capable of executing every command on the system.
