momento. There was quite a bit of sawing, grinding, cutting, filing and sanding to install the deck as it was intended however after all the work I have to say it look quite good. The physical installation of the product was by far the hardest part

i.e. <http://triangle-electronics.com/assets/userfiles/cortina-together-manual.xml>

cutting and placing the deck in the proper location in the dash the wiring was quick and painless. The diagram posted on the deck made for a quick cut and splice job. The performance of the product so far is OK. The navigation of the touch screen is easy and the transition from one input to another is seamless. The Bluetooth is clear and links quickly with my phone samsung NOTE. However the problem ive run into is the fine tuning of the audio. Trying to find the adjustments for treble, bass and mids is difficult. Ive searched the product booklet and still havent found any help. I really hope this review helps those interested in purchasing the product make an informed decision. Its definatly worth the money!!! After 6 months went by the head unit started changing volume by itself. It still plays movies and radio but as soon as I think all is well the volume will go from 17 to 39 and blast until I turn the knob for about 200 times. Then the volume will go to 0 and I will have to turn it 100 times back up to 17 and hope it stays there. The options on this unit are OK but not top of the line. I would say it is priced right for the options you get for the unit so dont be disappointed if it doesnt have everything a more expensive unit has. All in all it would have been good if it didnt break on me 6 months into it. Next time I will spend the little extra money for a more known unit brand. I was able to reuse factory mounting brackets and front trim piece with minimal modification, had to modify metal brackets in dash for clearance at the back of the unit it is quite deep. My vehicle was equipped with a factory amplifier unknown to me so I had to wire rca jacks to the wires going to the amp for speaker output. The one I recieved did not come with a double din tray, but it had the bezel and the tools to remove it from one. Be careful on screw length and mounting holes because there is a circuit board real close to a couple of mounting holes.

I mounted it behind the dash trim panel so the aux input is unusable but the bluetooth works even with a tracfone. You can use 2gb sd cards and thats it because it will not work with sdhc. Some of the controls like treble, bass, balance, and fader are not accessible through the display touchscreen, you have to use the remote. Packaging was great and shipping was very fast. Buy it you will like it. Screen visibility is poor on a sunny day unless your vehicle is tinted deep. Ive only used the CD player like 5X or so i dont know if its durable. I mostly use my USB drive the manual say it supports up to 4g but it plays with my 8g flawlessly. My biggest issue with this unit it that it doesnt display the time unless you are on the main menu and the fact that I can only connect one device at a time via bluetooth on this unit. For those who has concerns about the call volume being low via Bluetooth just dont realize the they can configure the volume separately in the main menu. For the price, i would recommend this unit. What really irked me was the aux and the usb, it was a wtf moment when I had to mount the headunit a little further just because the aux port was directly on the side of the screen. The usb is not a regular usb, you have to plug in another plug to actually have a usb drive on it. The Dvds and the CDs go into one button but the button doesnt even say CD it makes a difference when someone not familiar to the headunit tries to use it. The aux input is just a huge blue screen and it can get annoying, the CD drive is just a huge BOSS logo on it and doesnt display artwork. If your looking for style dont go for this one, my friend on the first day gave me crap about how odd the interface looks, Ima keep this for the sound but needless to say Im upgrading very soon. I put this head unit in a 93 eclipse. It is hard to mount it due to it being a bigger then normal dubble din so i have a small gap at the bottom of it but this way air can get it and it wont get hot.

Now this said built in Bluetooth. I use my touch ipod and it pairs up each time. Granted it takes some time because everytime i pair it i have to go tho the setting to do it. So when i get it the car it wont just pick it up. Also you can have two things paired at once i pair both my phone and ipod at once. When a call comes in it stops the music and tells me who is calling. Login to post Follow these

instructions DVD player. I don't have the wiring harness and have no idea what pins connect to my factory connector or what kind of plug connector I. I tried to use the remote but. You can try having it on and unplugging the power to get it to restart if the button won't. It is a safety feature to make sure that you are not watching the DVD while driving. I just installed my BV9990 today and had the same issue before taking care of that pink wire. However, I did not set up a password therefore I do not know what the password is. Next you take a grinder wheel and cut about a half an inch off of a metal bracket behind the plastic you just cut out, and be very careful of your wiring harnesss back there. It will go back all the way in and form the vent perfect fit. If there is just heat it back up and touch it with a towel to seal it up or you can use some epoxy. You will also need a digital interface wiring harness for the onstar and chime with the factory amps. It can be ordered online for around 80 or best buy has them for 150. Thats about it. Looks great and works decent. Probably wouldnt have bought the double din if i knew it was gonna take all the work and time to get it in and looking like it belongs in the car and not sticking out an inch or two. It takes time but with patience it can be done and flush mounted.

Overall the deck works like described, the instruction manuell lacks info. To play ipod touch or iphone you go to the bluetooth phone screen and sync it up and just hit play on your phone. If you go to the ipod icon it just says not supported or something along those lines. The book has no info on it. Gracias por su comentario. Lo sentimos, no hemos podido registrar tu voto. Vuelva a intentarlo The first was a 2005 which is my primary truck, and this a 2004. They are basically the same in terms of Dash layout. I am using a Metra 955812 Double Din MultiKit for both installs. The first installation was with a Pioneer Avic X930BT and it was a piece of cake, dropping right into place. It was a perfect fit and all the holes lined up with the Metra. It really is a thing of beauty, I love how it integrates into the Center Dash Bezel and it looks almost factory installed. Now for the Boss, what a nightmare. The chassis is just enough larger than a Double Din to make it a severe pain. My cutting was less than perfect so my installation is a bit of a mess. To make matters worse I also had to drill holes in the Metra side brackets to get proper alignment. All told it took more than an hour of screwing around to get the Boss to work with the MultiKit Double Din. Thankfully this is my own truck and is basically a beater for our vacation property. Also Im not an professional installer. I definitely would have lost money on the deal if I was and the customer would not have been all that happy. Ive just finished soldering the harness together with an OEM Ford Wire Harness Adapter. Ill do the final installation this weekend and report back on how the actual radio works. One item I have noticed already is that the USB Cable adapter Micro USB to a female USB plugs into the front panel in plain view, negating any possibility for a more discrete cable routing. I would have much preferred a rear connection so that I could route a USB Cable into the center armrest or the like.

Admittedly the Boss deck was very inexpensive and I can only hope it will play some music from an SD Card or CD and will work with a backup camera. Integration with my iPhone will be an added bonus. My main reason for installing it was to allow for the use of a backup camera to aid me in lining up a boat trailer hitch. The camera I installed in my 2005 with the Pioneer has proven extremely handy for parallel parking and backing up in parking lots. The 2004 is a Supercab with an 8ft bed and will really benefit from a camera. Gracias por su comentario. Lo sentimos, no hemos podido registrar tu voto. The owners manual is very simple and do not explain to much how to operate basic features as how to balance speakers as well as front and rear. There is no possibility to graduate the EQ. The unit has preset three EQ ranges, Rock, Classic and Pop. No possibility to adjust to the owner needs. It is a good unit. Maybe I was expecting a bit more. Gracias por su comentario. Vuelva a intentarlo Clock on it is all messed up.

Basic graphics, basic options, but great picture quality while playing Dvds. Item has a great bluetooth option which works perfect. Not to fond of the sound quality yet due to me also installing component door speakers at the same time of this installation and did not install an amp along with them. So quality is poor at the moment but we will see all in the near future. Now I am having problems with the clock on the product. I have set it multiple times and it has a mind of its own and resets to different times at different parts of the day. Have to carry a watch with me at all times so I can know the time of day. Vuelva a intentarlo Boss is not a huge known brand that I have heard of before I guess I will start off the the good then the bad; Good 1. The thing works like intended 2. It doesnt skip movies while driving if you set it up correctly A lot of people complained of high loading time, this is because the stereos like these Memorize the movie ahead of time in the player so that you dont have skips and scratches on your DVD. When At a stop, or not having taken off yet, it takes about 15 seconds to load the DVD Max, When driving It has to be a super smooth surface or it wont load because it cant get the frames memorized with bumpy roads. All and all you can pull over for 1 minute to load a dvd thats not an issue to me at least. Also as far as the DVD stuff goes, When set up properly, We were able to recieve a call, on blue tooth and listen to music then go back to the same spot where the movie left off resuming the movie. The only time it restarted over was when we had to turn the car off. Once power is going to the system, it will remember where you even from ACC to On. 3.

Bluetooth plays both Phone calls, music and internet over the stereo, We can listen to Slacker while driving and keep our own play lists instead of having to bring tons of CSs with us while having our phone on the charger you can also have more then 1 phone synced to the device and change who is synced easily with a single button which is nice when me and my husband are switching who is taking the car. 4. It has tons of ways to change the Look and sound, and it is surround sound for DVD. 5. The Head to tilt if needed in any mode so you dont have to mount it slanted or weird just mount it normal. Boss is still working on that, But you can hook your own GPS system up to the AUX if you really wanna hear it over the stereo. Accept the Radio for what it is and you will love it! In short, it is a graph thats used to show how different components of a computer system relate to each other and how they affect one another. For the most part, equilibrium phase diagrams are quite

beneficial for companies which are building or monitoring systems. They assist them to ascertain the sequence in which they ought to move their computers, as well as how to prioritize tasks and how much money they ought to spend on them. For example, if a business determines their computer needs should be moved into the top of the line with the greatest potential cost, then they can simply inform their computer manager which orders need to be fulfilled. How do you create an equilibrium phase diagram. Its really very simple. Diagrams may look different based on the type of software or hardware being analyzed. Therefore, the remedy is to use the same tool for many platforms. If you can create a diagram thats visually appealing and is consistent, then you will have the ability to use it for any platform. The next step is to produce a title for your balance phase diagram.

To keep it as simple as you can, simply use the term phase. As soon as you have a title, you will have to place the description in the middle of this phase diagram. The description should focus on the primary purpose of this equilibrium phase diagram and should not have any extraneous info. Eventually, they must write down the title of the equilibrium phase diagram that you made. Then youll save this diagram as a PDF file and give it to your computer management team to publish out. Making an equilibrium phase diagram is not complex. With just a little bit of research and time, it is possible to turn it into a diagram that help guide the decisions that your workers make when creating, planning, and executing business plans.
