And at the steering wheel is a company under the Google business umbrella called Waymo. A prototype model was driven by a legally blind member of the public on public roads in October 2015. With no pedals or steering wheel, the test run successfully lasted ten minutes. Working stealthfully in Google's "X" division, the team has completed tests and it's time to prepare the vehicle for the market. Terms such as trucking, logistics, ridesharing, and individual users have been teasingly dropped but the exact movement and timing of public sales are still unclear. With about 1 million traffic deaths across the world every year, this figure needs to be significantly reduced. People such as the legally blind man who took the car for a test spin in 2015. With resources ranging from auto history to car clubs, the site has something to appeal to all car owners! In the classic car world the more original parts you retain the better. However, on a 50yearold automobile the original weatherstrips can cost you some quality points at the local car show. When it comes to replacing classic car weatherstripping the name of the game is finding exact replica replacement parts. On classic cars susceptible to rusting sheet metal panels, the weather strips ability to seal properly becomes more important than the appearance. Since every car built in the last 120 years, utilizes rubber weatherstripping this article applies to all automobiles. Nevertheless, those with Ttops and sunroofs will want to pay special attention to the tips provided here. In addition, we'll discuss sourcing new parts that look exactly like the original ones from the factory. Whether you have a classic Pontiac Firebird Trans Am or a vintage MercedesBenz achieving a watertight seal becomes paramount. In fact, it's just as important is how the replacement parts look. This is why we'll spend some time discussing the final installation. Classic car enthusiasts have a saying. Rust never sleeps. With that said, it's a failed weather strip that lets the water in and helps the rust take over. For this reason removal procedures

can often become model specific. Some classic car auto repair manuals provide helpful stepbystep information to facilitate the removal of failed weatherstripping. Unfortunately, on older classic cars, with original parts, removing the old rubber can be a difficult operation. Thankfully, some special tools help make this task easier. They make narrow blade scrapers that fit inside of the weather strip retaining tracks. For vintage automobiles that utilize a combination of glue and retainers, you can use specialized solvents. Patience is a virtue when it comes to using weatherstrip removing solvents.http://nakajima-ya.com/user_data/image/ford-explorer-1991-thru-2001-haynes-repair-manual.xml

Make sure to provide enough soaking time for the chemicals to their job. Although these weatherstrip solvents work well when used as directed, precautions must be taken to protect the paint. Body shop technicians often lay down protective masking tape around the tracks. In addition, they cover the painted surfaces in the vicinity in case any splashes occur. Taking extra time in this area is critical. There are a few more areas that also require some protection. After removing the bulk of the old weatherstripping go back and soak any remaining pieces and glue spots with additional solvent. Body technicians use a clever trick. They place a rag on top of the stubborn spot and then apply the solvent to the rag. Failure to completely remove all of the old glue can cause improper sealing of the new weatherstrips. When you're finished, the tracks and mounting surfaces should look brandnew. Many auto parts companies do an excellent job of serving this niche market. Several large, respectable autoparts companies provide complete classic car weatherstripping kits. Whether you have a 50yearold classic Cadillac Eldorado or a 1970 Chevrolet Chevelle muscle car you will find exact match parts available. As a mechanic that has performed more than a few classic car restoration projects I can tell you that there are often surprises included in the weatherstripping kits. When you perform a complete restoration you uncover rubber components that exist in places you never thought of. Let me provide an example using a 1948 Cadillac 2door fastback I helped restore. These old Cadillac cars are known for water leaks in the trunk. Often by the time people figure out where the leak was coming from, it became necessary to replace the trunk pan. Replacing the tiny little weatherstrip underneath the trunk emblem can save you a lot of time and aggravation down the road. The companies that produce these weatherstrip kits also supply specialized molding clips and oddball retaining fasteners.

My advice is to give one of these companies a call and speak to somebody before you begin the project. This is better than ordering it online and figuring it out for yourself. These rubber pieces can also come with a manufacturing residue on them. Therefore, wash all of the weatherstripping with soap and water, especially the spots where you apply the weatherstrip adhesive. Now it's time to perform a dry fit installation. The dry fit is when you fully install the parts without the retainers and the glue. This allows you to get a feel for the curves and straight runs. With the dry fit completed, you're now ready for a permanent installation. Body shop technicians usually have their favorite types of weatherstrip adhesives. With that said, 3M makes an excellent weatherstrip adhesive product. The best advice is to apply the adhesive to one section at a time. Although you will have to work quickly, you still have plenty of time before the weatherstrip adhesive cures completely. This is another reason for working one section at a time. Finally, allow 24 to 48 hours for a complete cure before performing a water test to verify proper sealing. You've spent endless hours tinkering with it, cleaning it, and buffing it to perfection. This will really showcase the beautiful paint job and chrome parts on your vehicle. That means it's time to give your baby a bath. This may seem strange to you, but there's a good reason for it other than your wheels looking clean if you need your car towed. That prevents unwanted dirt, brake dust, cleaner runoff, and other debris from ruining your cleaning job. When cleaning all parts of your car, keep the water pressure light or medium. Don't exceed medium pressure. If all of it doesn't come off, no problem. You can use a mitt or sea sponge to scrub the rest of the grime away. After cleaning the exterior of your vehicle, you should wax it next. The most obvious benefit is how new your car will look.

This seal also prevents the elements from weathering your vehicle's shiny clean paint job. It's better to use too little and have to add more than use too much. This can remove stubborn airborne contaminants, tree sap, and even stray pieces of metal. Not just any cleaner will do. It's better to stick to simple water and soap to get the job done. Use a portable vacuum to suck up loose dirt, crumbs, leaves, and other debris that's accumulated. You'll have to get in the car and clean more deeply with a softbristled brush. That should dislodge those stubborn stains free. Check out Motor Era, a resource for all things vehicular. You can learn more about your car's make and model, review a glossary of automotive terms, and even get repair tips. But chances are you've never stopped to think about it. Here are 7 cool things about GMC truck history that you probably don't know. The popular truckturnedstatussymbol is beating most luxury competitors. On August 1, 1909, the future giant's Rapid F406 B was the first truck to climb Pike's Peak in Colorado. No matter if it's today's bestselling trimmed out cash cow or the "the Jimmy" of yore. And, they come by it in the most honest of ways. The delivery drivers made the trek from Seattle to New York in five days. The amphibious DUKW353 swam and drove across more than a few continents during WWII. Complete with bilge pumps, rudder, and outboard engine, GMC made them for the U.S. and allies. GMC won awards from the military for this design perfection. And, they are still around today! And, GMC gave America a dandy. The first on the market was the TVS4, or travel vehicle streamlined. The team was also behind GMC's history of its bus makes. And, the interior was replete with avocado green shag carpet. Though they were in production for a short time, they hold a great place in our hearts. His fond memory of touring days is the reasoning. GMC even came out with the "Sprint" in the 70's which is quite like Chevy's thenpopular El Camino.

GMC began diverging from their competitor's designs in the 90's. Today, their trendy designs like the Yukon and Denali series makes converts. Each year it seems, the celebrity GMC SUV has another milestone in sales. It seems the luxe black edition with a 10speed transmission is perfect for the desert. The language may be different there, but this region's buyers refer to GMC models as "Jims". The serious team took on the addition of a turbocharged V6 with a higher torque than the Corvette. And, the coolshell van the mercenaries drove as a base camp. And, the heavy duty machine took enough turns, dives, and gunshots to make it the true hero of the series. So much so that when the reboot ATeam movie came out in 2010, the van got a contract, too. For example, the first electric car began a short drive before the Model T was gracing roadways. But, they did not gain enough interest for good reason. Bicycles of the era were faster. Whether you are buying new, fixing the old, or need good advice, we've got your back. Or, need a manual for your wheels. We've got those, too.
