If this link does not work go to www.skyjack.com click on parts and service, technical manuals. Type in

model. If its a carelift make sure you type in carelift first. I had already tried going to their website and downloading the manual but all that gave me was a 1 page pdf of the cd cover. Edit I tried it again and all it links is the heading of the chapter. If you call skyjack they will send you a full copy or fix the link. Try updating adobe and if that doesnt work contact skyjack. They always have been helpfull to me for manuals of the product lines they bought into. Wife had some choice words for the web designer that came up with that endless loop of hot links. Looks like Ill give them a call tomorrow. Wife had some choice words for the web designer that came up with that endless loop of hot links. Looks like Ill give them a call tomorrow. Click to expand. Usually its just a pdf but I think its an old manual that they scanned then used it on a disk then converted it to a web file. Too many steps for a simple manal. Is there anything specific you need to know Usually its just a pdf but I think its an old manual that they scanned then used it on a disk then converted it to a web file. Is there anything specific you need to know. Click to expand. Im sure somewhere along the way though ill need a torques spec or service procedure. Give them a call though Im sure someone else will need it too.

I noticed it didnt work at all on googe chrome but worked on ie. Maybe try firefox. CD Cover.pdf FYI Fire fox didnt work either thats what I was on last night. You gotta go with IE and be very patient while the stuff loads. Which is exactly what the guy at sky jack told me when I called. He also said that there was infact a broken link and he notified their IT people to fix it. Please help me Made in Japan. It has a 3066 Mitsubishi engine. Thanks Download these links Hope these help. Click to expand. Could you possibly repost for Hitachi ZX50U. Cheers. It is not intended to replace training or provide interpretation of the standards. Both OSHA and ANSI have regulations that apply to the use of forklifts, and it's important to note which specifically address the safe use, design, and machine requirements associated with utilizing work platforms on telescopic handlers. It addresses the use of work platforms in a few areas Section 5.15 talks about elevating personnel, Section 5.16 talks about the operator qualifications, and Section 8.24 addresses platforms for elevating personnel. The standard also covers the training requirements for platform occupants and the operator of the telescopic handler, as well as the proper types of fall protection as defined by the local authority, the jobsite, and the equipment manufacturer. Obviously, there are a lot of different types of equipment available out in the marketplace, and selecting the best piece of equipment for the job is paramount to ensuring a safe work environment. Although it is a bit of a gray area, in instances where there is no other practical option, a telescopic handler is an appropriate means to lift personnel if it is used correctly. For example, ANSI B56.6 says that a telehandler platform cannot exceed 10 inches beyond the width of the machine in both directions, so if you have an 8footwide machine, the platform cannot be more than 9'8" wide.

Although some platforms on the market are 12 or 16 feet wide and OSHAcompliant in the way they are constructed, they do not meet the ANSI requirement per B56.6. It also notes that modifications made to the platform that are detrimental to its safe use are prohibited. If a manufacturer does not say if they allow work platforms on telehandlers, then the users need to obtain specific permission to do so. First is a forkmounted platform where the platform has pockets that mount over the forks and can be secured so the platform cannot slip off. The other is a quickswitch coupler where the forks are removed from the telescopic handler, and the platform mounts directly to the coupler. In order to use a platform, it must be securely attached to the lifting carriage or forks and the lifting mechanism must operate smoothly. While some telehandlers have frameleveling capabilities, others do not. If the machine does not, it cannot be used to lift personnel. Other select parts of the standard state that the machine must rest on firm footing, and the drive controls in the cab must be in neutral with the parking brake set if personnel is going to be lifted. However, if there is any conflict between the different agencies providing guidance, it is recommended that the user follows the requirement that is more stringent. OSHA regulations cover the capacity for what a platform can and can't accomplish with a telescopic handler; the proper ways it can be constructed; access; use; fall

protection; and training. OSHA agrees with ANSI that unless the manufacturer approves it, you cannot use it. Additionally, the entire platform needs to be attached to the forks, and the telehandler cannot be moved horizontally or driven while the platform is occupied. It requires machines to meet the ANSI B56.11969 Safety Standards for Powered Industrial Trucks. In OSHA 1910.

178 1 i Powered Industrial Truck, the regulation calls for the employer to ensure the operator of the powered industrial truck is competent to operate a powered industrial truck safely. This includes training program implementation, training program content, refresher training and evaluation, avoidance of duplicative training, and certification. When you have a person working at elevation, it's critical that the truck operator is on the machine. There is really no reason for them to leave when the person is elevated in the platform. However, questions arise as different innovations come out. One common question is what is the method for shutting down power to the machine by the platform occupant. Most platforms do not have controls; rather the controls are provided in the cab, so there is no requirement to shut off power to the machine by the platform occupant unless there are controls in the platform with an emergency shutdown switch. This machine meets two different standards ANSI B56.6 and ANSI A92.5. Machines with lift controls in the platform that do not permit the operator to drive only need to meet the requirements of ANSI B56.6. If the operator's manual is silent on the use of elevating personnel, it is the user's obligation to contact the manufacturer for approval prior to using a personnel work platform. Also, if the manufacturer is no longer in business, a professional engineer needs to be consulted to determine if the machine is suitable for use with respect to elevating personnel. If the requirement is more frequent, an aerial work platform is a better alternative. However, Gehl does require the platform to meet the requirements listed in ANSI B56.6, Section 8.24, which Gehl lists in the Operator's Manual for all machines equipped with its PWP System. If the requirement is more frequent than that, an aerial work platform is a better alternative. If the requirement is more frequent than that, an aerial work platform is a better alternative.

MEC recognizes the potential for additional utility and value provided by such systems and would not be adverse to developing such a system if it had a significant customer demand for this option. Currently, the company has elected to develop a complete selfpropelled boom lift line rather than develop a system that allows a telehandler to be converted to a boom lift. It is MEC's opinion that this option provides limited functionality for simple access tasks but falls short in displacing the need for boom lifts in a significant amount of applications. However, Mustang does require the platform to meet the requirements listed in ANSI or ASME B56.6, Section 8.24, which Mustang lists in the Operator's Manual for all machines equipped with its WPS. If one of its vehicles must be used to elevate personnel, only an approved work platform can be used. If the requirement is more frequent than that, an aerial work platform is a better alternative. Always become familiar with the specifics of each manufacturer's machine through training, reading the operator's manual and instructions, and obtaining proper approvals for areas that might not be addressed. It's irresponsible not to become as knowledgeable as you can about the equipment, the standards, and the proper use as it relates to training, fall protection, and compliance. I found parts on the net but no real manual. Near as I figure I might have to open the hoses on the lift cyls to relieve them and maybe the what looks like to be cushion cyl in the rear. I tried to remove lift cyl pins but they are pretty much stuck from a ridge. I will someday. Announces the Addition of Southwest Products to the Boom Truck and Articulating Crane Distribution Network Manitex International, Inc. The Operating Forklift Platform is made of detailmolded plastic and stamped metal construction. This product now features a can motor for years of reliable operation.
